

January 16th, 2024

Dear Sir/Madame,

I am writing to you to express my interest in the Patent Easter Internship at D Young & Co.

My name is David Lawton, I am currently a student at Trinity College Dublin working toward a BA in Theoretical Physics. I came across the internship while looking for possible work for the summer, and while patent law was never something I'd considered previously, it was surprising to see it could be an option out of a physics degree. I came to the conclusion that the profession may be suited to my personality, as a rather fastidious individual. I have become genuinely curious as to what the life of a patent attorney entails and would be extremely grateful to be considered for a place.

Now to the requested sentences. While freezer bag zips and clothing zips actually operate by similar mechanisms, the difference is in quality versus quantity, with a clothing zip being made up of many interlocking 'lock and key' systems, a freezer bag zip is simply one very large, airtight one. The same mechanism isn't used for both as the situations require different specifics, a freezer bag must be airtight, and a clothing zip must be less likely to break open, as such, each mechanism cannot provide the unique benefit of the other.

Thanks for your considerations,
Sincerely,
David Lawton.
